

Click2Cast 3.0.5 Release Notes

Highlights

The following features and capabilities have been added or modified for Click2Cast® version 3.0.5. New features include parallel computing, improved icon design, enhanced process definition, and additional language support.

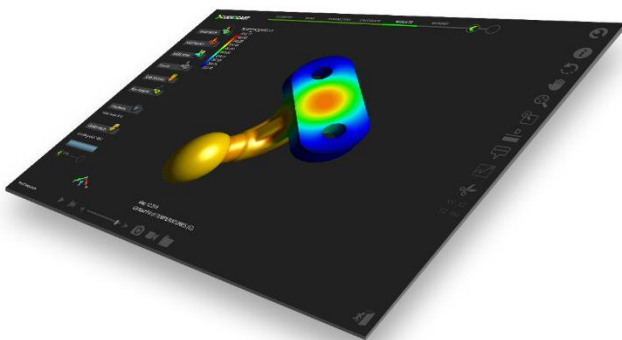

Parallel Computing

The new solver utilizes parallel processing to drastically reduce computation times. This allows you to run more simulations per day.

Improved Icon Design

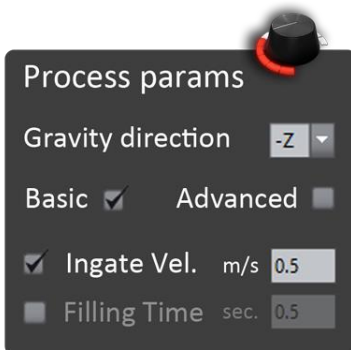

New and improved icons have made the user interface simpler and cleaner, allowing you to focus on what matters most – the task at hand.

Enhanced Process Definition

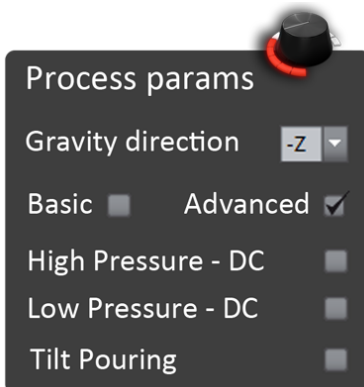

Process parameter definition now offers basic and advanced configurations.

The basic configuration allows you to quickly define a process by entering an Ingate Velocity or Filling Time.

With the advanced option, you can set up all of the available processes, including:

- High Pressure-Die Casting
- Low Pressure-Die Casting
- Tilt Pouring

Additional Language Support

The user interface can now be viewed in English, French, German, Italian, Chinese, Japanese, Korean, Portuguese, Spanish, and Turkish.

In addition to these enhancements, the meshing tool has been improved and several internal bugs have been fixed with this release.
